

Teacher-gap mechanism, and the feedback the chain does not carry

Mainland Portugal, 24 NUTS III regions, 2025-2040. Demand is an identity on enrolment and a historically estimated ratio, except the third cycle and secondary, which uses an elasticity.

The gap is summed PER CHANNEL with no cross-credit: netting the two gives exactly zero in all sixteen years, so the entire 6,765 arises from refusing that credit.

One period of a recursive supply block: stock(t) = stock(t-1) - exits + entries.

Exits is a parent of BOTH the lateral channel and recruitment need; the second path dominates, since 94.7% of the retirement wave comes from the 60+ band.

The contracted reserve is unmeasured anywhere in the chain. It carries about 70% of the variance of max(gap_y,0) + max(gap_l,0), a quantity in which the graduate
